Correct me if I am wrong.

Is the name of the programming software for the IC-F3021 Radios called CS-F3021?

What is the latest version number?

Would anyone having a copy of this either download to the files section here or email me ofline with it at rhughes3@.... I had someone send me a copy of CS-F3020 but I am not real sure that this is the correct software.

Thanks
Ray

63. A util to modify locked channels on the 400pro

Yahoo group: icomsoftware
Date: 2011-11-16 21:29:05 UTC
From: tdtfreae
Topic: 63 Message: 63

Hi,

All of you there have been working with the Icom 400pro knows what pain in the A.. it is to change the channel numbers in bank 1. all time have to open up the icf file, then find the right line, convert the hex and so on.

I've made a small util that do that job.
How it works
1. start the software.
2. Open your icf file.
3. Type the numbers of channels that you want in the different banks.
4. Save the file.
5. DONE

The util have been uploaded in the File section.
Hope you can use it, and that you'll appreciate the work done.

All the best
Kenneth

Ray, you can download software that is great for the W32A @ www.danplanet.com.
From there select the CHIRP software.
FYI, make sure you let the software read your radio then setup the channels you want before you write to the radio. I use it on my
W32A with Windows 7 and it works great!

From: janpa1p
Topic: 89 Message: 89

Hi guys,

I have several IC-F1010's. I programmed these a few years ago (as far as I remember with CS-F1000 V2.2) without any problems.
Now, when I read them, it seems to go OK, but at the end the display shows "CLONEIEF". After on/off the display says "CLONE" and I cannot operate the radio. I now have 7 1010's in that status, and I am getting worried.

Where do I go wrong? Who can help me thinking?

Greetings,

Jan

Subject: [icomsoftware] Re: New file uploaded to icomsoftware - CS-V80

Has anyone managed to get the software to run?

I tried it on my new IC-V80 (USA version) and get an error message to the effect that the radio is not compatable. The software appears to install properly. I tried it on two different computers and two different cables; one an original from Icom, the other homebrew.

Regards,
W

Thanks Ronnie,

Could I be missing a step? The help file says to simply plug in the cable, turn on the radio, then start the software.

I was wondering if I had to put the radio into 'clone mode' using the keypad?
Does the radio LCD change to indicate the cable is plugged in (as some of my other radios do)?

Thanks,
Walter

Walter, I just hooked everything up, and tried it. Been a while since I used it.

All I did, was exactly as you described. Then I hit the read icon, and it read the radio. The display on the radio changed from a frequency display to 'clone'.

Is your comport correct? Have you looked at the device driver page to make sure the driver installed correctly??

Ronnie,

Pretty sure all is OK with the PC. I'm using a 9-pin RS232 cable, not the USB model. As I said, tried two different computers and two different cables - one a true Icom cable. OS on both is WinXP. Reinstalled the software several times.

If I try without the radio attached it reports something like 'no radio found'.
If I try with the radio it reports something like 'non-compatible radio'. This makes me think it is getting 'something' back from the radio. Starting to think that the first cable I tried, the homebrew one, might have caused a problem with the radio. Not a pleasant thought since the radio is only about two weeks old!

I was wondering if the software was 'crippled' in some way, but you say it works for you. I'll search locally for someone with a radio and see what I can figure out.

I appreciate you taking the time to answer my questions.

Hi All!

I am new here and fideling around with Icom radios for a
hell long time.

If somebody is in need for software for Marine Radios

- IC-M801E/IC-M801(GMDSS)
- IC-M802
- IC-M710 (DOS based)

and may be later I can get

IC-M700pro

so please let me know.

I will upload them at a leter time!

BTW: Very good idea that forum here!

Many greetings

Thommy/DK1ESD

104. IC-77 and IC-707 Questions - Looking for Software EX-1121-12

Yahoo group: icomsoftware
Date: 2013-03-18 13:44:39 UTC
From: DK1ESD
Topic: 104 Message: 104

Hi All!

Does anybody know here in the forum, whether the LMR IC-77 and its
ARS-derivate IC-707 are having different firmwares, or are they both
different regarding the mechanical shapes?

May I convert the radios, as it is the case with Motorola?

At least it is looking alike, because the models are having different features and
capabilities regarding the channel programming (amount of channels, alpha-numeric)

Also I am looking for somebody, who has the programming software
for the IC-77.

The designator shall be EX-1121-12, what I could figure out from
other sources of the www.

Thanks in advance

Greetings,

Thommy/DK1ESD

105. Re: Icom ic-m801e - Qualified Answer

Yahoo group: icomsoftware
Date: 2013-03-18 14:15:18 UTC
From: DK1ESD
Topic: 86 Message: 105

Hi Andy and Mimmo!

Indeed, the IC-M801E has its own unique software, whereas it can be used for both versions "E" which contains a DSC controller class E and for the GMDSS version, which contains a class A one.

If still in need, I could provide it.

Regarding the IC-M802 there is to say, that there are different versions on the market, which needs also unique softwares.

There is a Marine version and a "General-Version" w/o DSC, which
seem to use different software.

Many greetings

Thommy/DK1ESD

106. IC F510 programming help!

Yahoo group: icomsoftware
Date: 2013-03-23 22:20:23 UTC
From: dil99
Topic: 106 Message: 106

Hi all. I have several IC F 510 radios that I am trying to program for a Charity. Some I can program ok, others (with the same file) program ok and look ok until I TX and they revert to channel 1. If I reprogram with only one channel they work fine.

They are ex data radios and I have looked to see if there are any cut or soldered links inside but can't figure it out. Any ideas?

Dave

Topic: 106 Message: 107

Hi Dave,

may be there are some priority or emergency channels checked,
that the radio shall transmit on that particular channel.

To follow the way of exclusion, I would first tray to program the affected radios with a brand-new codeplug and check, whether same story is going on, or not.

In such a way at least you can figure out, if the bug is hidden in the radio or the codeplug.

Hi,

the only point might be, that radios are different in their
firmware versions, that you might need different versions of the programming software.

Hi to all, to whom it may concern:

There is a so called "cross-radio, cross-platform" RSS, which is able to program a plenty of radios of different manufacturers.

The name of this software is "CHIRP".

May be it can help to close the gaps, where original RSS is currently
not available.

I will try it out.

On the other websites there were only RSS for IC-2100 and 2200 available - so please disregard my previous message.

Hi Ronnie, that's what I am getting also, but I am using com 4, which should be ok. My system is wins 8, but the prog works, just not seeing the radio as it says non-compatible! Anyway will try it again tomorrow as I am a bit tired now, btw, I have the Icom IC-V80 Sport also.

115. New to ICom, need some help

Yahoo group: icomsoftware
Date: 2013-07-21 22:03:58 UTC
From: matt_tietjens
Topic: 115 Message: 115

I'm trying to help out our ambulance service, which carries Icom's, I have done lots of Kenwood and Motorola's, but these are new to me. Can someone direct me to what software I need for IC-F3021S & IC-F14 radios. I see adjustment software and cloning software? What do I need to change programming in these radios, and would anyone be willing to share? I think I have found the proper cables.

Thanks!
Matt

Just wondering how everyone is getting this software to work without the product ID? Trying to use it on a Win 7 laptop and it stops at the product ID section when trying to install it....

Thanks for any advice!

118. software for IC M401 and OPC-1086 schematic

Yahoo group: icomsoftware
Date: 2013-08-07 22:08:38 UTC
From: kapitein.hans
Topic: 118 Message: 118

Hi,

I'm looking for the CS-M401 software and the schematic for the OPC 1086.
Can anyone supply?

Thanks,

Hans

Hi,

Don't have the schematic of it, but it's pin5 of the connector. You can see this in the schematic of the radio.

1. DATAM+

2. DATAM-

3. DATAS+

4. DATAS-

5. GROUND

6. PROGRAMMING

7. GROUND

8. GROUND

Have you already found the sw CS-M401

Cheers,

Rob

Small mistake, below the correct connections

1. DATAM+

2. DATAM-

3. DATAS+

4. DATAS-

5. PROGRAMMING

6. GROUND

7. GROUND

8. GROUND

From: <n8wel@...>
Topic: 132 Message: 132

I need firmware update & boot loader for the F3161DT RR version it has V3.1.1 RR and DREV 2 and would like to update to present V4.6.2 RR with DREV 3 or to standard LMR V5.2 with DREV 3 as an option. Right now it is password cloning protected and cannot get into to reprogram without the password (and cannot find the source) and the firmware flash should be able to wipe that out also.

Thanks in adavance.

From: niupkt06@...
Topic: 143 Message: 143

Hi All,

Let me preface this by saying this is my first time dealing with an Icom radio (usually M and KW). I have a F3161DT (REV 2.7 RW DREV 2.4) and am looking for some information related to "normal" vs "RR" versions. What exactly are the differences between the two firmwares. Can you load a "normal" firmware into a "RR" radio? With that being said does anyone have the "normal" and/or "RR" software and firmwares? I apologize for my ignorance with this but you guys are the experts in my book and figured this was the best place to ask. Thanks!

187. Software in Need: CS-F100 ADJ REV. 1.0

Yahoo group: icomsoftware
Date: 2015-09-18 11:45:05 UTC
From: northernindianarepeatergroup@...
Topic: 187 Message: 187

Hello.. I have a ICOM X-Band 50 that has one F121 and one F221 radio. I'm experiencing issues with deviation. Lets just say 15k or more out of each radio doesn't matter which one..

I'm unable to adjust devation from the internal control board as I'm using a external controller. But the external controller can only handle so much before cutting out.

The software I have is only a cloning software that allows you to program freq. power, ctcss etc. Its not the service adjustment software. CS-F100 Adj. Rev. 1

The repeater is install at site with everything hooked up. Would be easier to make necessary adjustments at site. Anyone out there that can help I would greatly appreciate it!

From: sven98de@...
Topic: 196 Message: 198

Thanks Nikola for the reply,
I googled as you wrote and get some pictures of the OPC-980 but unfortunately not the wiring details.
What cable is the opc486, I found nothing about it in the internet.
I have a schematic of the OPC-478 cloning cable with the phone jack at one and a DB9 female on the other side. The photo of the OPC-980 shows that it has a jack plug and a 8-pole plug but how are the poles connected internally ?

Sven

199. Re: OPC-980

Yahoo group: icomsoftware
Date: 2016-01-15 16:43:40 UTC
From: Nikola Zivkovic
Topic: 196 Message: 199

my appologies, i was in a hurry, i meant OPC478.

the 478 is mostly used for handheld units, so it has the 3.5mm jack.

http://mw0gkx.co.uk/radprog/files/opc973.jpg

here is a scehamtic of how to adapt the 478 to 980, basicly its completely the same programmer, but special connector on radio. Marine radio mostly.

My appologies for misstypes, if you want to know exactly what all the connections are, google service manual for your radio, if you understand electronics youll see where all the wires go. but here you have all you need to connect it properly.

246. IC-M801E programming Base station MMSI

Yahoo group: icomsoftware
Date: 2017-10-16 11:16:40 UTC
From: sasi.nayar@...
Topic: 246 Message: 246

Hi all,

I am a licenced amateur (VK5SN) as well as a licenced marine radio operator. I am the licencee of a marine rescue station with the call sign VMR 512 in Australia.

I am trying to reprogram a base station MMSI into an Icom IC-M801E. The radio was programmed with the MMSI of another base and I am trying to reprogram it with another one. I have the CS-801E (legit version) and the necessary cable. I am able to read the radio but it would not let me write a base station MMSI into the computer. Did speak at length to one of the service techs from Icom Australia and they said the CS-801E cannot be used to write a base station MMSI. They were apparently using a third party software called EzyClone which operates on XP and not supported by Icom. Unfortunately based on the directive from their HQ they dumped their copy of EzyClone. Without this software it is not possible to program the radio with a base station MMSI. As a last ditch effort I am trying to see if anyone on this list can help and has seen / used EzyClone before? My extensive search on the web revealed nothing.

Any help will be appreciated
Cheers
Sasi
